

Table 1: Testing accuracy (between 0 and 1, higher is better) of the models on the data from different cryptocurrencies. Trivial accuracy is the accuracy of always choosing that the market will rise, which is not useful in practice.

| Coin | Test Acc. | Trivial Acc. |
|------|--------------|--------------|
| BTC | 0.714 | 0.644 |
| DOGE | 0.714 | 0.617 |
| ETH | 0.657 | 0.513 |
